1. Get Your Free Google API Key

To access the full capabilities of this application, you need a free **Google Gemini API key**. This key acts as your personal passport to connect the app securely with Google's artificial intelligence models. You can obtain one completely free of charge by signing in with your regular Google account.

Follow these step-by-step instructions to generate your key:

1. Go to the Google AI Studio platform at aistudio.google.com and sign in using your Google credentials.
2. Once logged in, look at the top left corner or main dashboard and click on the **"Get API key"** button, which features a key icon.
3. Click on the blue **"Create API key"** button.
4. From the options provided, select **"Choose an imported project"**.
5. Click on **"Create project"**.
6. Under the **"Name your project"** field, type **Brandon** and click **"Create project"**.
7. Ensure that **Brandon** is now automatically selected under "Choose an imported project". If it is not, click the dropdown menu and select it manually.
8. Under the **"Name your key"** field, type **Brandon** again, then click **"Create key"**.
9. Once the project and key are successfully generated, your new key will appear in the table. Look for a short blue code snippet (for example, `...8Us4`) with "Brandon" listed underneath it. Click directly on this blue code to reveal its full properties.
10. In the **"API key details"** window that pops up, click the copy icon located to the right of the masked API Key.
11. Return to your browser tab containing brandonbiggs.pages.dev. Locate the yellow **"API key"** input field, paste your copied key into it, and click the green confirmation button.

Congratulations! You have successfully unlocked all the features of the application. As long as you do not clear your browser cache or cookies, your API key will remain securely saved locally in your browser and active for future sessions.

Please Note: This application has been optimized to leverage Google's generous **free daily tiers and quotas**, making it fully accessible worldwide without requiring any financial commitment. However, if you already possess a paid Google Cloud or AI Studio corporate key and prefer to use it, you can simply insert it into the same field.
